### Subject Details: Physics SL Paper 3 Markscheme

Candidates are required to answer **all** questions in Section A and **all** questions from **one** option in Section B. Maximum total = **35 marks**.

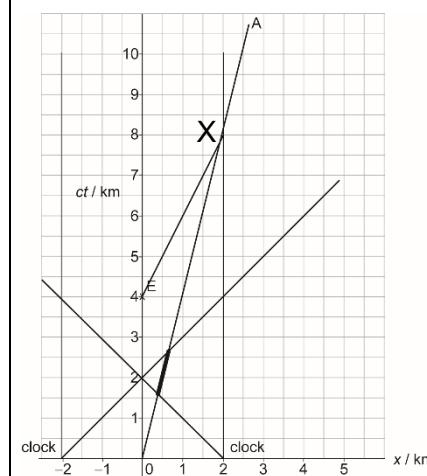

1. Each row in the “Question” column relates to the smallest subpart of the question.
2. The maximum mark for each question subpart is indicated in the “Total” column.
3. Each marking point in the “Answers” column is shown by means of a tick (✓) at the end of the marking point.
4. A question subpart may have more marking points than the total allows. This will be indicated by “**max**” written after the mark in the “Total” column. The related rubric, if necessary, will be outlined in the “Notes” column.
5. An alternative wording is indicated in the “Answers” column by a slash (/). Either wording can be accepted.
6. An alternative answer is indicated in the “Answers” column by “**OR**”. Either answer can be accepted.
7. An alternative markscheme is indicated in the “Answers” column under heading **ALTERNATIVE 1 etc.** Either alternative can be accepted.
8. Words inside chevrons « » in the “Answers” column are not necessary to gain the mark.
9. Words that are underlined are essential for the mark.
10. The order of marking points does not have to be as in the “Answers” column, unless stated otherwise in the “Notes” column.
11. If the candidate’s answer has the same “meaning” or can be clearly interpreted as being of equivalent significance, detail and validity as that in the “Answers” column then award the mark. Where this point is considered to be particularly relevant in a question it is emphasized by **OWTTE** (or words to that effect) in the “Notes” column.
12. Remember that many candidates are writing in a second language. Effective communication is more important than grammatical accuracy.
13. Occasionally, a part of a question may require an answer that is required for subsequent marking points. If an error is made in the first marking point then it should be penalized. However, if the incorrect answer is used correctly in subsequent marking points then **follow through** marks should be awarded. When marking, indicate this by adding **ECF** (error carried forward) on the script. “ECF acceptable” will be displayed in the “Notes” column.
14. Do **not** penalize candidates for errors in units or significant figures, **unless** it is specifically referred to in the “Notes” column.

Question			Answers	Notes	Total
1	a	i	Straight line within all error bars ✓		1
	a	ii	Correct reading of two points at least 35°C apart ✓ 0.019 to 0.024 ✓	<i>Allow ECF from a) i) if mark not scored.</i>	2
	a	iii	Read their $R_0$ from the y-intersection ✓ gradient = $\alpha R_0$ OR substitute into equation coordinates of a point on the line ✓ Correct calculation of their alpha ✓ $K^{-1}$ or $^{\circ}C^{-1}$ ✓	<i>If line not drawn or extended to y-axis, accept <math>R_0</math> from 5.6 to 6.1 Allow ECF for MP3.</i>	4

Question		Answers	Notes	Total
2	a	<p>Read at least two points correctly and consistently ✓</p> <p>Use <math>\frac{1}{2} \cdot g \cdot t^2</math> with a length interval from two non-consecutive points OR for two (or more) length intervals, using consistent time intervals ✓</p> <p>Correct calculation of g ✓</p>	<p>Award [2] max if they use one single length interval of consecutive points.</p> <p>Award [1] max if they miss to subtract the initial point in their length interval or if they use inconsistent time intervals.</p> <p><i>Do not penalize significant figures in the final answer.</i></p>	3

	<b>b</b>	<p>Use 10% for delta <math>t^2</math> ✓</p> <p>Estimate an uncertainty for <math>s</math> using an absolute of 0.5 OR 1 mm AND propagate it to 1/their length interval OR 2/their length interval respectively ✓</p> <p>Add both relative or percentage uncertainties AND calculate the absolute uncertainty ✓</p>	<p>Allow ECF for MP3.</p> <p><i>Do not penalize significant figures in the final answer.</i></p>	3
	<b>c</b>	<p>Flash must be so short that blurring is within the absolute uncertainty / error of determination of <math>s</math> ✓</p> <p>(Final) speed is around <math>2 \text{ m s}^{-1}</math> and error is about 1 mm so (maximum) duration around <math>\frac{1}{2000} \text{ s}</math> ✓</p>	<p>Award [1] max if they argue that images might merge and state a maximum of 0.025 s (or less).</p> <p>Award [1] max if they use the uncertainty of time and state a time of (2 x) <math>0.05 \times 0.05 \text{ s} = 0.005 \text{ s}</math> (or less).</p> <p>Award MP2 if they state an interval of 0.001 s or less.</p>	2

Question			Answers	Notes	Total
3	a		1.7c ✓		1
	b		$\left[ \frac{c + 0.70c}{1 + \frac{(c-0.70c)}{c^2}} \right] \text{ or } \left[ \frac{c - (-0.70c)}{1 - \frac{c(-0.70c)}{c^2}} \right]$ seen ✓ c ✓	Award MP2 if no calculation seen.	2
	c		(Discovery implied that) speed of light (in vacuum) is constant / invariant / does not depend on speed of source / same in all inertial frames ✓		1

Question			Answers	Notes	Total
4	a	i	<p><b>Alternate 1</b> Place light source midway between clocks / at origin O ✓ set clocks at <math>2000/c</math> and start them with flash of light from O ✓</p> <p><b>Alternate 2</b> Initially together (at origin) and synchronised ✓ then moved apart (infinitely) slowly✓</p>		2
		ii	$\tan \theta = \frac{1}{4}$ ✓  $v = 0.25c$ ✓	Accept BCA	2
		iii	Correct construction of light cones seen✓ Line identified on diagram✓		2
	b	i	Line at correct angle intersecting A at worldline of right-hand clock.		1
		ii	$\frac{8000}{c} = 2.7 \times 10^{-5}$ «s» ✓	Allow ECF from b) i)	1

	<b>c</b>	<b>i</b>	two construction lines✓ difference in time identified correctly ✓		2
		<b>ii</b>	A has changed from one inertial reference frame to another (when it changed velocity) ✓	Accept “Due to acceleration at turnaround”	1

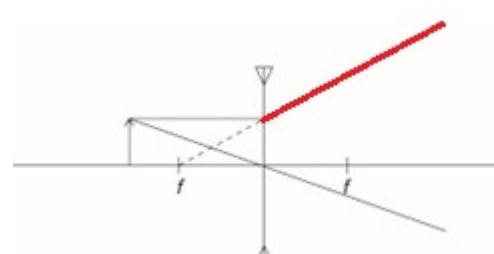

Question		Answers	Notes	Total
5	a	$\gamma = 4.5 \checkmark$ time interval in Earth frame = $= 9.9 \text{ } \mu\text{s} \checkmark$		2
	b	<p><b>ALTERNATIVE 1</b>          For Earth time of flight = <math>8.5 \mu\text{s} \checkmark</math>  <math>8.5 \mu\text{s} &gt;&gt; 2.2 \mu\text{s}</math> so muons should have decayed <math>\checkmark</math>          but <math>9.9 \mu\text{s}</math> (time dilation) <math>&gt; 8.5 \mu\text{s}</math> so many muons survive OWTTE <math>\checkmark</math></p> <p><b>ALTERNATIVE 2</b>          Without time dilation the distance travelled in Earth frame =  <math>0.975 \times c \times 2.2 \times 10^{-6} = 0.64 \text{ km} \gg \checkmark</math></p> <p>With time dilation the distance travelled in Earth frame = <math>0.975 \times c \times 9.9 \times 10^{-6} = 2.9 \text{ km} \gg \checkmark</math></p> <p>Without time dilation, most of the muons would have decayed before reaching the surface <math>\checkmark</math></p>		3

Question			Answers	Notes	Total
6	a	i	<p>correct use of rotational kinetic energy formula for one angular speed ✓</p> $\frac{1}{2} \times \frac{0.072 \times (8400^2 - 3600^2)}{9.6} \text{ OR } 216 \text{ «kW» ✓}$	Award [1 max] if $(8400 - 3600)^2$ seen	2
	a	ii	<p><b>ALTERNATIVE 1</b></p> $\Gamma = \frac{\text{power}}{\text{average rotational speed}} = \frac{2.16 \times 10^5}{\left( \frac{8400 + 3600}{2} \right)} \text{ ✓}$ <p>36 «N m» ✓</p> <p><b>ALTERNATIVE 2</b></p> $\text{Angular acceleration} = (-) \frac{(8400 - 3600)}{9.6} = 500 \text{ <<rad s}^{-2}\text{>>} \text{ ✓}$ $\Gamma = (I\alpha = 500 \times 0.072 =) 36 \text{ <<N m>>} \text{ ✓}$	Allow ECF from a) i)	2
	a	iii	$\Gamma \theta = \Delta E$ <p>or</p> <p>Use of <math>\theta = \omega_{\text{ave}} \times t</math> ✓</p> <p>or</p> $\theta = \omega t - \frac{1}{2} \alpha t^2$ <p>Correct conversion into revolutions «<math>r \frac{57600}{2\pi} = 9170 \text{ rev}</math>» ✓</p>	Allow ECF from a i) and ii) Award MP2 for any correct conversion of an angle in radians to number of revolutions	2

	<b>b</b>	increase moment of inertia/density/mass of cylinder ✓ increase radius/depth of cylinder/mass distribution further from centre ✓ use greater angular velocity / torque applied ✓		<b>Max 2</b>
--	----------	---	--	--------------

Question			Answers	Notes	Total																				
7	a		<p>Z located horizontally to the right of Y ✓</p> <p>Correct overall shape ✓</p>	<p>Arrows not required</p>	2																				
	b		$\frac{0.1 \times 1.2 \times 10^{-3}}{0.48} \checkmark$	Accept BCA if given to 3sf	1																				
	c	i	<table border="1"> <thead> <tr> <th>process</th> <th><math>Q / \text{J}</math></th> <th><math>\Delta U / \text{J}</math></th> <th><math>W / \text{J}</math></th> </tr> </thead> <tbody> <tr> <td><math>X \Rightarrow Y</math></td> <td>-188</td> <td>0</td> <td>-188</td> </tr> <tr> <td><math>Y \Rightarrow Z</math></td> <td>+262</td> <td>+157</td> <td>+105</td> </tr> <tr> <td><math>Z \Rightarrow X</math></td> <td>0</td> <td>-157</td> <td>+157</td> </tr> <tr> <td>whole cycle</td> <td>+74</td> <td>0</td> <td>+74</td> </tr> </tbody> </table> <p>Line 1 correct ✓ Line 3 correct ✓ Lines 2 and 4 correct ✓</p>	process	$Q / \text{J}$	$\Delta U / \text{J}$	$W / \text{J}$	$X \Rightarrow Y$	-188	0	-188	$Y \Rightarrow Z$	+262	+157	+105	$Z \Rightarrow X$	0	-157	+157	whole cycle	+74	0	+74		3
process	$Q / \text{J}$	$\Delta U / \text{J}$	$W / \text{J}$																						
$X \Rightarrow Y$	-188	0	-188																						
$Y \Rightarrow Z$	+262	+157	+105																						
$Z \Rightarrow X$	0	-157	+157																						
whole cycle	+74	0	+74																						
	c	ii	$W = 105 = p(V_Z - V_Y) \checkmark$ $= 0.48 \times 10^6 \times (V_Z - 0.25) \times 10^{-3}$ $\text{so } V_Z = 0.47 \times 10^{-3} \text{ «m}^3\text{»} \checkmark$	<p>Award [2] for a BCA</p> <p>Award [2] for correct use of the adiabatic equation</p>	2																				

	<b>iii</b>	Uses 4 <sup>th</sup> row of Q and 2 <sup>nd</sup> row of Q for working values ✓ $\eta = \frac{74}{262} = 0.28$ or 28% ✓	<i>Allow ECF from incorrect values in table.</i> Award 0 if $\eta \geq 1$ OR 100% Award [2] for a BCA	<b>2</b>
	<b>d</b>	Isothermal process needs engine to run very (infinitely) slowly ✓ Adiabatic process needs engine to run very (infinitely) quickly OR requires insulation ✓	<i>Treat reference to frictional and other dissipative losses as neutral.</i>	<b>2</b>

Question		Answers	Notes	Total
8.	a	<p>Applies correctly the magnification to the situation given:</p> $-\frac{v}{u} = -4 \text{ OR } \frac{v}{u} = 4 \quad \checkmark$ <p>Replaces into lens law equation, e.g. <math>\frac{4}{v} + \frac{1}{5} = \frac{1}{f} \quad \checkmark</math></p> $f = \left[ \frac{v}{5} = \frac{40}{5} = \right] 8.0 \text{ <<cm>>} \quad \checkmark$	<p>Award [1] max if they use <math>v/u = -4</math> leading to <math>f = -(1/7.5) \text{ cm}</math> or <math>-0.13 \text{ cm}</math>.</p>	3
	b	<p>2 rays correct <math>\checkmark</math> virtual <b>OR</b> upright <b>OR</b> diminished/smaller <math>\checkmark</math></p> 	<p><i>Do not award MP2 if one feature given is incorrect.</i></p> <p><i>Allow ECF for MP2</i></p>	2

Question			Answers	Notes	Total
9.	a	i	concave / converging / parabolic [primary] mirror ✓ plane [secondary] mirror ✓	treat mention of eyepiece as neutral	2
	a	ii	Longer focal length «for a particular tube length» ✓ higher magnification «for a particular eyepiece» ✓ brighter image / less loss of intensity ✓		1 max
	b	i	$2.5 \times 10^{-3} \times 8 = 2.0 \times 10^{-2}$ «m» ✓	<i>Do not accept <math>2.5 \times 8 = 20</math> if no unit stated. Do not penalize use of sin or tan.</i>	1
	b	ii	rays reflect from primary and converge towards a point on secondary ✓ rays reflect off secondary and converge at X ✓	Do not award MP2 if rays parallel to principal axis	2
	b	iii	8 – 4.5 or 3.5, or 4.5 - 8 or -3.5 seen or used ✓ $u = -3.5 \text{ m}$ and $v = 4.5 \text{ m}$ so $\frac{1}{f} = \frac{1}{(-\frac{1}{3.5})} + \frac{1}{4.5} = -15.8 \text{ m}$ ✓	Award [2] for a BCA	2

Question			Answers	Notes	Total
10.	a		$n_{\text{core}} \times \sin c = n_{\text{cladding}} \times \sin 90$ OR $1.59 \sin c = 1.48 \sin 90$ ✓ 69 / 68.6°✓	Accept Snell's law expressed without sin90 for MP1	2
	b	i	Angle of refraction in core = $90 - 68.6 = 21.4^\circ$ ✓ $\ll 1 \times \sin I = 1.59 \times \sin 21.4 \gg$ 35.5°✓	Allow ECF from a) and from MP1	2
	b	ii	these rays enter the cladding✓		1
	c		$\log_{10}(10^6) = 6$ so range is 60 dB ✓ $\ll \frac{60}{5.5} = \gg 10.9 / 11 \text{ «km»}$ ✓		2

Question		Answers	Notes	Total
11.	a	<p>Compares by number of stars (globular <math>\sim 10^4 - 10^6</math> / more stars OR open <math>\sim 10^2</math>, fewer) ✓</p> <p>Compares by gravitational interactions (globular bound / open loosely bound, disrupted by gas clouds, evaporation etc) ✓</p> <p>Compares by age of stars (Globular clusters older) ✓</p> <p>Globular spherical open more irregular ✓</p> <p>Presence of gas and dust in open✓</p>		2 max
	b	<p>cepheid stars pulsate / vary their size / vary their luminosity ✓</p> <p>connects period and luminosity ✓</p> <p>«distance can be determined with» observations of apparent brightness «from Earth»</p> <p>OR</p> <p>mentions use of <math>L = 4\pi bd^2</math> ✓</p>		3
	c	<p>the distance estimate will be too large / an overestimate ✓</p> <p>as apparent brightness is lower/underestimated ✓</p>		2

Question		Answers	Notes	Total
12.	a	use of $A = 4\pi R^2$ ✓ use of $L = \sigma A T^4$ e.g. $\frac{A_L}{A_\odot} = \frac{L_L T_\odot^4}{L_\odot T_L^4}$ ✓ $\frac{R_1}{R_\odot} \ll \sqrt{\frac{100000}{6.3^4}} \gg= 8.0$ ✓	Award [3] for a BCA	3
	b	Use of $L \propto M^{3.5}$ e.g. $(1.0 \times 10^5)^{\frac{1}{3.5}}$ ✓ 27 ✓		2
	c	«Max initial mass around $30M_\odot$ so» likely fate is black hole / neutron star ✓ Reference to Oppenheimer-Volkoff limit / remaining mass/core about $3 M_\odot$ ✓		2

Question			Answers	Notes	Total
13.	a		$v = 0.025c \checkmark$ $v = Hd = zc \checkmark$ correct conversion of $v$ to $\text{km s}^{-1}$ <b>AND</b> $d$ to $\text{Mpc}$ so that $H\left(=\frac{v}{d}\right) = 69.9 \text{ «km s}^{-1} \text{ Mpc}^{-1}\text{»} \checkmark$	Accept other correct values close to 70 (e.g. 70.1) due to rounding.	3
	b	i	Correct conversion of $H$ units to $\text{m s}^{-1}$ and $\text{m} \checkmark$ $T = \frac{1}{H} = 4.4 \times 10^{17} \text{ «s»} \checkmark$	Allow ECF from a)	2
		ii	rate of expansion is constant «at its present value»	Accept constant speed of recession	1

---
